

5 TOP REASONS WHY ORACLE NETSUITE PLANNING AND BUDGETING IS THE BEST FINANCIAL PLANNING SOLUTION

for NetSuite Customers

- 1. Integration** – Oracle NetSuite Planning and Budgeting seamlessly integrates with NetSuite providing efficient access to all of your financial and non-financial data. This ensures NetSuite Planning and Budgeting users have the information they need to make timely, impactful business decisions. NetSuite Planning and Budgeting offers, and will continue to offer, the highest level of integration with our NetSuite solutions because our development teams work closely together to ensure all the latest functionality is available. Other planning and budgeting software vendors do not have the same level of commitment to integration with NetSuite.
- 2. Scalability** – NetSuite Planning and Budgeting is built on the Hyperion Planning/ Essbase platform, a proven financial analytics solution. NetSuite Planning and Budgeting scales from start up to enterprise, meaning it's the last budgeting/planning/reporting solution you'll ever need. Other planning and budgeting solutions are built on a relational database structure with proven limitations. Some of these vendors are undertaking a major infrastructure overhaul to try and move to a more modern technology and reduce limited functionality. Either way you're either stuck with an outdated non-scalable infrastructure or you're looking at reimplementation some time down the road.
- 3. Flexibility** – NetSuite Planning and Budgeting technology has proven itself time and again in the marketplace. This reputation comes from standardized leading implementation practices but also from offering the ability to customize the technology to match your business requirements. Other planning and budgeting solutions have infrastructure that is built with a rigid interface and customers must make compromises in templates, forms and reports because of these limitations.

4. Reporting and Analytics – NetSuite Planning and Budgeting Smart View functionality is a significant advantage for any company that wants to leverage Microsoft Office applications in their planning, budgeting and forecasting process. Smart View is a Microsoft Office Add-In that comes with NetSuite Planning and Budgeting, and gives the average user the ability to create “Ad Hoc” reports utilizing Excel and even connect those reports to PowerPoint presentations say for senior management or the Board of Directors. This reduces the learning curve, dramatically increases efficiency and empowers end users to create their own reports and presentations while utilizing NetSuite Planning and Budgeting data.

This eliminates the need for additional “IT” investment and allows end users to utilize a very familiar tools, like Microsoft Excel and PowerPoint, reducing anxiety and ensuring higher user adoption.

5. Single Vendor – NetSuite Planning and Budgeting is NetSuite’s planning, budgeting, forecasting and reporting platform. It is supported by NetSuite, and your organization has one point of contact if there are ever any issues. Why not improve your relationship management efficiency and go from managing two relationships to one for all your planning, budgeting and forecasting needs.
