Enhancements.*

What's New?

“Inform, streamline and protect your business”

We're happy to announce that the Sage 200cloud Spring 2019 Enhancements are now available for Standard, Sage for Education and Professional Editions.

Bringing you a wealth of new features for all modules, these improvements help you use Sage 200cloud to inform, streamline and protect your business even more.

Microsoft Power BI

You can now integrate your Sage 200cloud data directly with Microsoft Office 365 and easily build immersive business reports that reveal powerful new insights. By getting to know your business better, you'll be able to make informed decisions that lead to improved outcomes.

Import Enhancements

Our new ability and performance enhancements will help you spend less time on data entry and updates. There are now fewer steps required to batch import and update records within nominal ledger, stock, sales and purchase ledger, making the process even easier.

Restricting bank details

Thanks to our new functionalities, you can now take full control over who can change the bank details of your staff, clients and suppliers. This helps you make new restrictions to further bolster your security.

Reprint remittance

Trace, locate and reprint supplier remittances from wherever you choose to store them. Whether it's on your computer, OneDrive or DropBox, you can now save admin time and quickly access the files you need.

We're always working to improve Sage 200cloud by creating enhancements that simplify your processes and help your business operate more productively. Keep an eye out for future improvements to make the most of your system.
